RunPod Proof of Use
E30S

“Our team did **not use RunPod** in this project. BISCOACH’s AI features are powered by the Google Gemini API, called server-side from our Next.js application.

We chose this approach because our workloads (document reading, conversational assistance and content generation) are well **served by a hosted API** and **do not require self-managed GPU infrastructure**.

We appreciate the support and opportunity to explore RunPod’s platform.”
